CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

Step 1: Awareness

The patient notices heart-related symptoms or risk factors and seeks health information.

Step 2: Medical Consultation

The patient visits a doctor to discuss symptoms, lifestyle habits, and medical history.

Step 3: Diagnostic Testing

Medical tests such as ECG, blood pressure, cholesterol, and blood sugar tests are conducted.

Heart Disease Analysis using Tableau

Step 4: Data Collection & Analysis

Patient records and test results are collected and analysed using Tableau dashboards to identify patterns and trends.

Step 5: Risk Assessment

Healthcare professionals evaluate the patient's risk of developing heart disease.

Step 6: Treatment Planning

A personalized treatment strategy is developed based on diagnosis and risk factors.

Step 7: Treatment Implementation

The patient follows prescribed medications, therapies, and lifestyle recommendations.

Step 8: Progress Monitoring

Doctors continuously monitor patient health and treatment effectiveness.

Step 9: Follow-Up Care

Regular check-ups are conducted to track recovery and modify treatment plans if necessary.

Step 10: Healthy Lifestyle Maintenance

The patient maintains healthy habits such as exercise, balanced nutrition, stress management, and avoiding smoking to prevent future heart problems.
