

Heart Disease Analysis using Tableau

TEAM ID	SWTID-2026-8531
PROJECT TITLE	Heart Disease Analysis using Tableau
MAX MARKS	3 MARKS

3.3 – Data Flow Diagram

Step 1: Data Collection

Patient health data is collected from medical records and datasets.

Step 2: Data Storage

The collected data is stored in a database.

Step 3: Data Preparation

The data is cleaned and organized for analysis.

Heart Disease Analysis using Tableau

Step 4: Tableau Analysis

Tableau analyses the data and identifies patterns and trends.

Step 5: Risk Assessment

Patient risk levels are evaluated based on the analysis.

Step 6: Dashboard Creation

Interactive dashboards and visualizations are created.

Step 7: Report Generation

Reports and insights are generated from the dashboards.

Step 8: Decision Making

Healthcare professionals use the insights for diagnosis and treatment planning.
