

CHAPTER – IX

ADVANTAGES & DISADVANTAGES

9.1 – Advantages

- a. **Interactive Visualization:** Tableau takes heart disease information and turns it into charts and dashboards that you can play with which makes the information a lot easier to get.
- b. **Finding Out What Puts You at Risk:** It helps figure out what things can increase your chance of getting heart disease like how old you're if you smoke if you are overweight if you have diabetes, high blood pressure or if you do not exercise.
- c. **Making Decisions Faster:** Doctors and other people who take care of you can look at trends and patterns quickly so they can make good decisions fast.
- d. **Looking At a Lot of Data:** Tableau can handle an amount of patient information and make it easy to look at so people do not have to do it all by hand.
- e. **To Use:** You do not have to be a computer expert to use Tableau because it has a way of dragging and dropping things to make nice pictures of the information.
- f. **Watching What Happens in Time:** The dashboards can be updated all the time to keep an eye on what's happening with heart disease and how patients are doing.
- g. **Explaining Things Clearly:** The reports and dashboards help show what is going on in a way that doctors, researchers and the people who run hospitals can understand.
- h. **Helping To Prevent Heart Disease:** Tableau helps find people who're more likely to get heart disease so hospitals can make special programs to help those people.
- i. **Looking Closer at the Information:** You can use filters. Look closely at certain groups of patients to get more details.
- j. **Working Together Making Reports:** The Tableau dashboards can be shared with others so all the people taking care of you can work together.
