

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope

- a. **Predictive Analytics:** Tableau can work with machine learning and AI to predict heart disease risk
- b. **Real-Time Health Monitoring:** Future dashboards can show real-time patient health data from hospitals and wearable devices.
- c. **Customized Treatment:** Patient data analysis helps healthcare providers create treatment and prevention plans.
- d. **Advanced Risk Assessment:** Future systems can accurately identify high-risk patients by analyzing health indicators.
- e. **Integration with EHR:** Tableau can connect with hospital databases for patient insights.
- f. **Remote Patient Monitoring:** Data from smartwatches and health sensors can track heart health continuously.
- g. **Public Health Planning:** Governments and healthcare organizations can use Tableau dashboards to monitor heart disease trends and create awareness programs.
- h. **Decision Support Systems:** Interactive dashboards can help doctors make more accurate clinical decisions.
- i. **Cloud-Based Analytics:** Future Tableau implementations can use cloud technology for access and sharing across healthcare institutions.
- j. **Research and Innovation:** Researchers can use analytics to discover new patterns, risk factors and treatment outcomes related to heart disease and Tableau.
